

1.36.8.22–23: Why February 29 is a Human Illusion?

Dear synchrononauts:

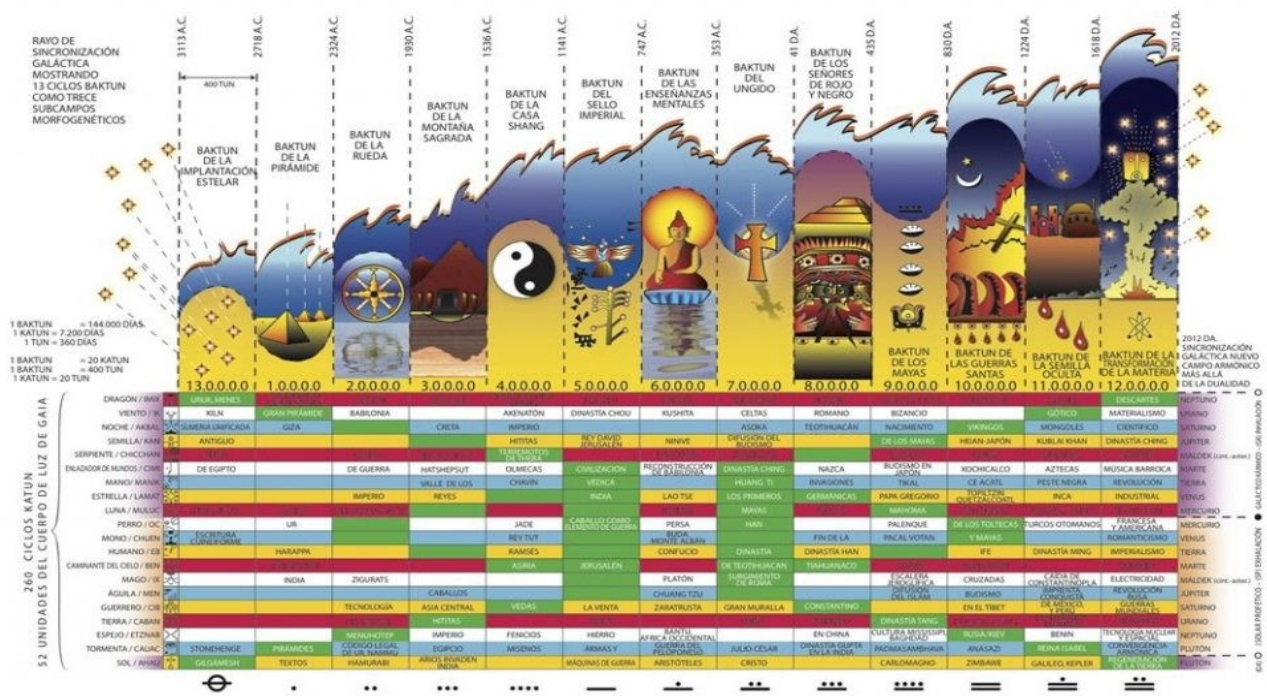

The vast majority of humans live in an illusion of the mind, thinking that the material world is the only real thing when deep down, it is the other way around: the mental world is the only real thing. What is defined as “space” or “physical reality” are direct consequences of the mental world. Before a body is created with a heart, brain, organs, muscles, nerves... it must first have been thought, in other words, conceived.

We are a manifestation of the Law of Time ($\text{Time} \times \text{Energy} = \text{Art}$) and when we incarnate on this plane of existence, we accept all the inconsistencies that have been projected within the temporal conceptual field. Assuming the Gregorian Calendar of 12 irregular months as a frame of reference is a mental program that is imposed when one is born on Earth.

The development of the Gregorian Calendar is a milestone that began about 5125 years ago, starting in the year -3113 BC. This date marks the beginning of the 13 Baktuns or the Great Cycle of History, which at a synchronological level is understood as the process through which the most advanced consciousness of planet Earth has gone through to extend itself at a material level and conquer it at the level of resources. The 13 Baktuns came to an end at the close of the cycle on 12/21/2012.

CICLO DE LOS 13 BAKTUN: ONDA ARMÓNICA DE LA HISTORIA

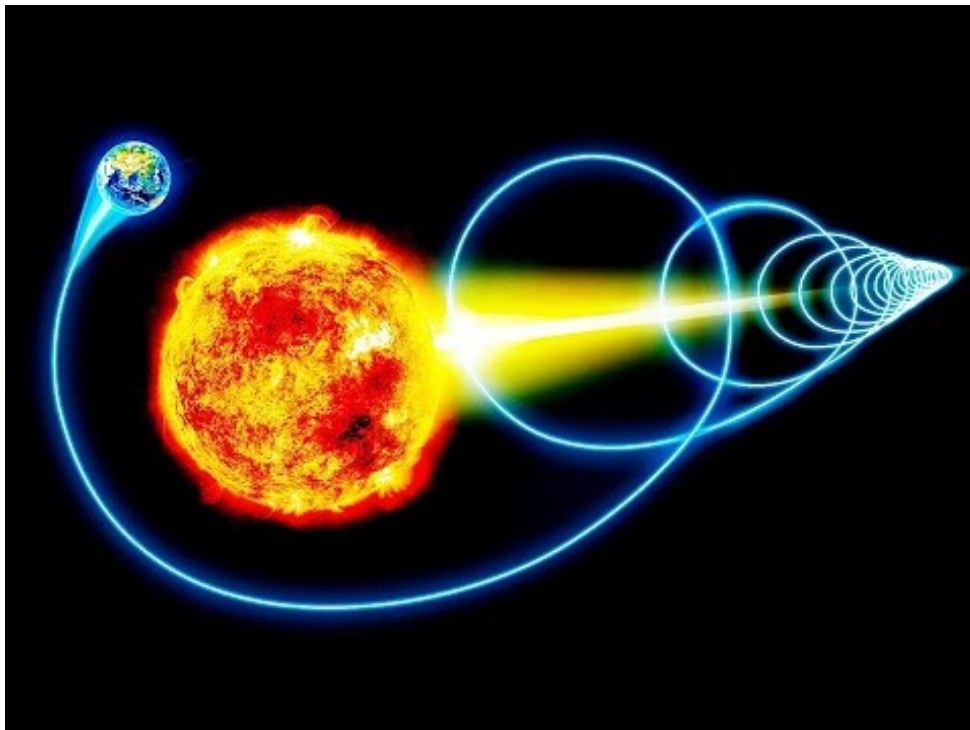

Extraído de *El Factor Maya*, por José Argüelles, Capítulo 5: Historia y el Sistema Solar: La Visión Galáctica, pág. 132-133

Although it is assumed that we already live in post-history, the 12:60 frequency webs continue to impact humans who in mass use the Gregorian Calendar of 12 irregular months as the main tool to measure time.

The leap day that is added every 4 years is just another adjustment to continue maintaining the 12:60 frequency in the minds of humans. To break the spell of February 29, there are several points that must be clarified to begin to awaken from the illusion:

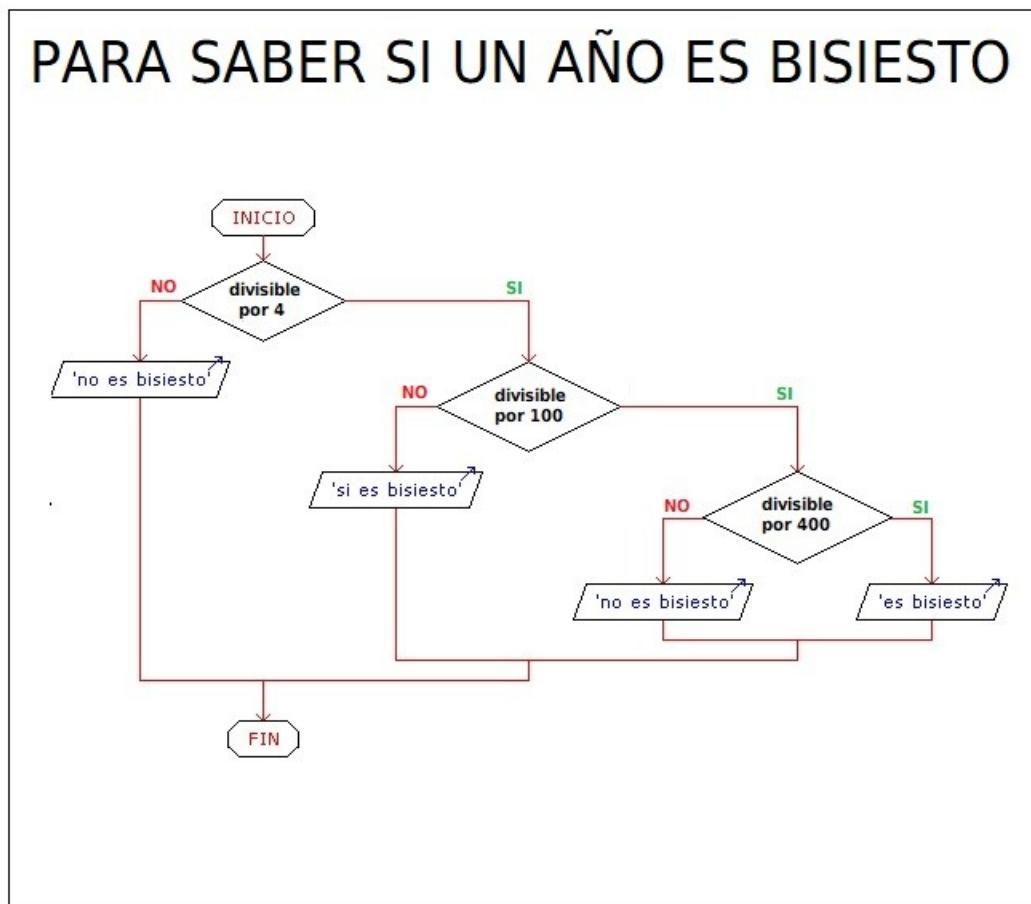

The Earth's translation cycle with respect to the Sun can vary depending on the reference point. The tropical year is the duration of one complete revolution of its orbit, which is 365.242198 days of mean solar time: 365 days, 5 hours, 48 minutes and 46 seconds. In this measurement, a meridian that the Earth opposes the Sun two consecutive times is taken as a reference. On the other hand, the sidereal year is the time that passes on Earth to pass through the same point in its orbit, taking the stars as a reference. Its duration is 366.256436918716 sidereal days. It is equivalent to 365.256363 mean solar days: 365 days, 6 hours, 9 minutes and 10 seconds.

Adding 1 day every 4 years to the solar ring is still a materialistic view of time. It will never be accurate to say that the Earth's orbit around the Sun is 365 days and 6 hours. Even so, according to what was stated in the first point, it is still somewhat inaccurate from the minute count. If you really want to take the Earth's rotation cycle into account in an adjusted way, the following is proposed from the Lemnismath YouTube channel:

[Por qué necesitamos años trisiestos | Las matemáticas del calendario](#)

For those who don't know, there is a rule that says that if the number of the year is a multiple of 100, it will not be a leap year, but if it is a multiple of 400, it will be a leap year. The year 2000 was a leap year because even though it is a multiple of 100, it is also a multiple of 400. The year 2100, however, in this system cannot be a leap year.

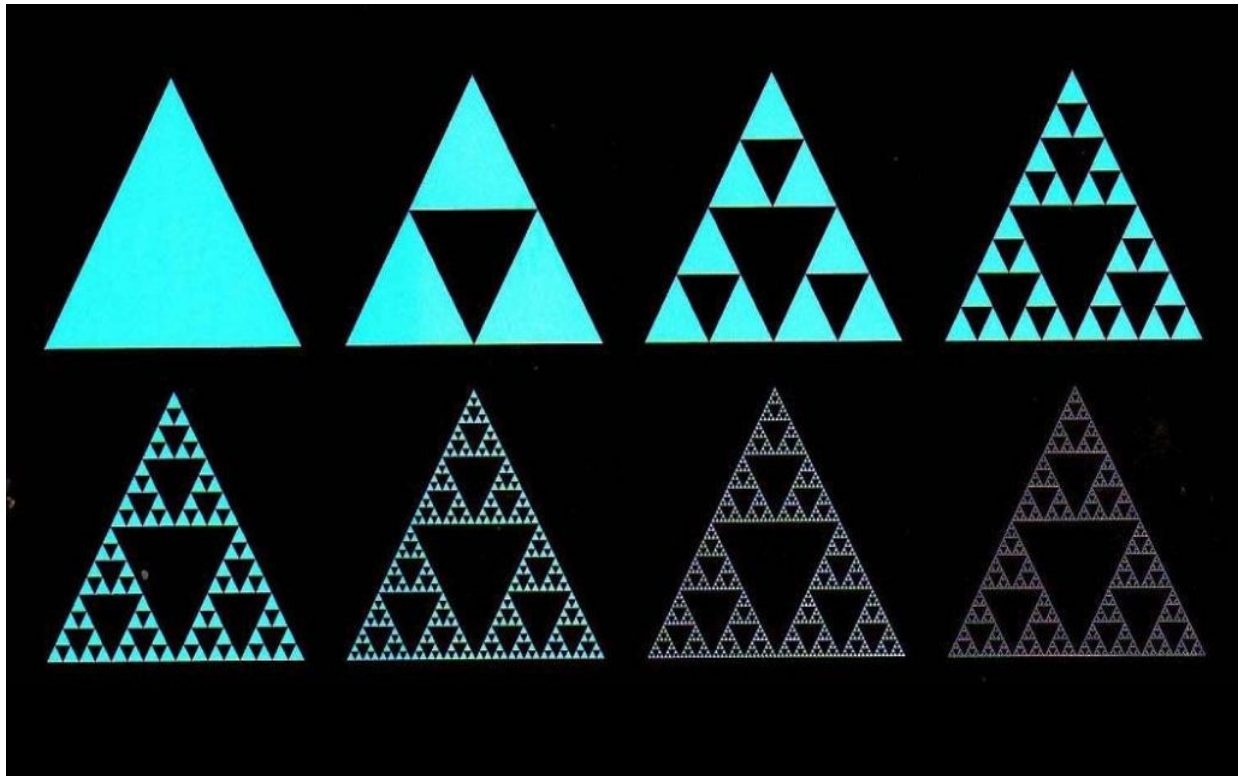

At this point, what then is the way to awaken from this temporary illusion?

The 13:20 frequency is the galactic formula in which the synchronic order manifests in this plane of existence. This is why humans are born with 13 major joints and 20 fingers. For its part, the Synchrony of the 13 Moons is the most harmonious way that exists to measure 1 year of 365 days where there is no place for any leap day every 4 years. Next, here are several explanations that explain at a synchronological level why 2/29 within the Gregorian Calendar does not have time codes or day for the Synchrony of the 13 Moons:

1 – Synchronic order helps us understand the 4th dimension as a system of integers without divisors, or in other words, without divisions of the mind. This means that the hypothetical 6 remaining hours of a cycle of the Earth's rotation around the Sun in 365 days are a form of abstraction that leads to the distortion of the mind, adopting the planet Earth as the only important element in the equation.

2 – Precisely, time is the sphere of the mind and to be harmonized from the 13:20 frequency it is essential to adopt the Syrian cycle as a central reference point in the equation. The Syrian cycle is the 52 years it takes for the star Sirius β to complete one revolution around the star Sirius α . This is one of the main keys to understanding that the time codes are numerological proportions that build a fractal network of understanding (52 is the fifth part of the Tzolkin, 52 is the number of weeks in the 13 moons...). When we understand that 52 years of 13 Moons + 1 day out of time correspond to 73 exact revolutions of the Tzolkin ($52 \times 365 = 73 \times 260 = 18980$ days), what sense does it make to add 1 more day every 4 years?

3 – The synchronous year begins on 7/26 of the Gregorian Calendar because it is when Sirius α , the Sun and the Earth align on the horizon called this Ortho Heliaco phenomenon. Precisely, if we start counting the days from the beginning of the synchronous year, when we reach day 28/2 within the Gregorian Calendar, this day corresponds to the 218th of the year. **KIN 218 White Planetary Mirror** is the time code that corresponds to the day of the opening of the tomb of Pakal Votan. This is a clear sign that there is no event that escapes the synchronic order.

4 – As far as is known, the month of August has 31 days when it initially had 30 and was called Sextile. This day that was added by Augustus Caesar was extracted from the month of February when it then had 29 days. The day 8/31 within the Gregorian Calendar has the **KIN 21 Red Galactic Dragon** as its psi-chrono. The number 21 is the one used in many cases to represent the galactic archetype of Hunab Ku. The day 29/2 of the Gregorian Calendar has no code and is defined as Hunab Ku 0.0, which can also be understood as a day out of time.

UMB 441

21
HUNAB KU 21

De todos los tesoros ocultos que salen a la luz
Ninguno existe más vasto
Que Hunab Ku 21
Unidad de la totalidad, secreto del 441
Único Dador de Movimiento y Medida
Hunab Ku no se puede ver o abarcar
Pero unos especiales somos nombrados
Conocidos por el nombre de Magos del Infinito
Somos muchos y sin embargo somos uno
Los maestros del Cubo de la Ley
Nuestra enseñanza ejemplifica la esencia del cubo
Los Señores del Cubo, emanamos y radiamos los poderes del siete
Con oídos celestiales escuchamos los santos sonidos sagrados
Del vacío universal
Nuestro voto es la simplicidad
No consumimos nada, ni tomamos nada
Sólo sabemos dar
Los maestros de la zuzuya surfeamos
Las olas del infinito
Infinítamente
Nos reconocerás cuando te veas a ti mismo
Emanando del centro del cubo
Conocemos es conocer la totalidad
Conocer la totalidad es conocer la paz
Conocer la paz es entrar plenamente en el
Impresionante e interminable esplendor despliegue galáctico

•••

5 – Continuing with the study of psi-chrono units, day 28/2 of the Gregorian Calendar has as psi-chrono **KIN 164 Yellow Galactic Seed**, the year of galactic synchronization (2013) and day 1/3 has as psi-chrono **KIN 168 Yellow Crystal Star**. If we add these two KINs we get **KIN 72 Yellow Resonant Human**, which in turn has hidden **KIN 189 Red Resonant Moon**, the KIN that corresponds to Pakal Votan.

6 – Leap years are always years of the “Wizard” seal, the power of timelessness, and leap day is always between a “Monkey” seal and a “Human” seal. These are clear signs that the Gregorian calendar of 12 irregular months is adjusted within the evolution of the human, which transcends illusion and thus achieves timelessness. Whoever is born on 2/29, if he does so before noon, would adopt the KIN of the “Monkey” seal and if he does so after, the KIN of the corresponding “Human” seal.

7 – The first year of the Syrian cycle, the year of the KIN 34 White Galactic Wizard (1987-88) the leap day occurred 34 days after the first KIN 218 White Planetary Mirror within the account of the Earth Wizards and precisely between the KIN 251 Blue Self-Existing Monkey and KIN 252 Yellow Overtone Human. The KIN 251 Blue Self-Existing Monkey has KIN 10 White Planetary Dog as its hidden object and this has the KIN 218 White Planetary Mirror as its guide. Here again, clearly the opening of Pakal Votan's tomb is present.

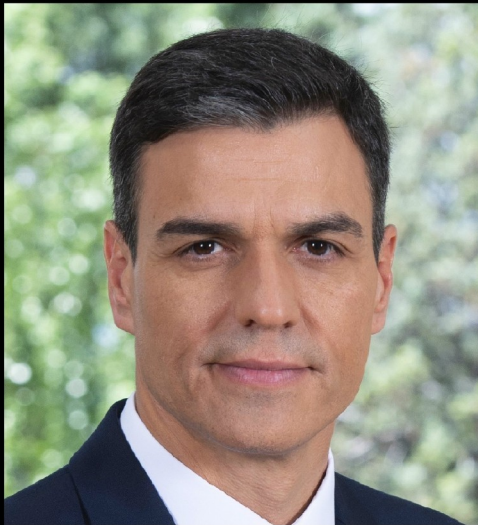

Without adding more for now, with all this we hope to have clarified why 2/29 does not exist within the time codes nor is there a day assigned within the Synchronary of the 13 moons. An explanation for those who say "but hey, we live this day the same, people are born and die, things happen..." I will say that yes, in the physical world of illusions it is apparently lived as such on a material level, but from the point of temporal view of the 4D dimension, the measurement of a day is a completely human construct because from the dimension of time there is no movement: everything is an eternal flow. The "here" and "now" is the only real state to which we should aspire, which is the permanence of consciousness at a temporal level, or in other words, timelessness.

I wish you the best development of 4D consciousness and until the next galactic report.

Sincerely,
Galactic Maya 999.

P.S: Today marks precisely a 52-year anniversary for the President of the Government of the state of Spain, Pedro Sánchez, who was born precisely on 2/29. Let's hope that in some way this information can reach you so that you can wake up from the illusion in which the vast majority of humans who use the Gregorian Calendar live.
